

Ship Type: Converted Car Ferry

Lifespan: Built 1947, Scuttled 1985

Length: 200ft

Depth: 80ft

Location: Wolfe Island, Kingston, Ontario, Canada

GPS N44.13.5580 W76.24.9860

Type to enter textDropping down the line and reaching the bow davit, it is only another dozen feet to the open door of the wheelhouse. Just abaft the wheelhouse is a set of steel stairs that lead to benches lining the curved bulkhead and large square windows provide exit points with large doorways also convenient. The depth is 60 feet (18.5m) and the air pocket above divers' heads is exhaust from previous diver visits and is not for breathing

Exiting the salon on the port side, divers follow the stairs to the main deck where vehicles were parked and recently a motorcycle was placed to demonstrate past cargoA nearby doorway leads into the depths of the engine room and only the diver with experience, skills and training should proceed here. Through catwalks and piping, one may proceed to the engine mounts at 75 feet (23m) depth and you encounter the "elevator" shaft leading to the top deck. Near the port rail you will find the portholes (of which several were liberated by some divers that need them more than others) with logos and names of support organizations. Just around the corner is the ship's name and registry port.
